Decision Tree

Defensible classification that's simple, fast, and well-proven

When the pressures of processing new inmates, determining correct housing, and crafting the right programming decisions in a timely manner converge, you need support. Leveraging objective data to minimize your litigation exposure, the Decision Tree is the only automated and court-tested classification instrument to help you streamline mission critical tasks. In a matter of minutes after answering only a few questions, your team will have a housing and programming recommendation in-hand for each inmate. Not only does the Decision Tree save time and eliminate stress, but it also keeps everyone in your facility safe through confident choices and data-informed decisions.

Key Features

- Only fully automated classification tool available to practitioners

- Quick, user-friendly instrument that guides you to decisions

- Easily reclassify/review classification levels using times and triggers

- Defensible data that limits exposure to litigation

- Closed-ended questions for clarity and simplicity

With equivant Corrections, your agency can:

- Make fast and easy housing decisions based on security levels

- Give your staff access to confident, time-saving technology that streamlines your intake process

- Limit your legal exposure by relying on court-tested software for decision making

- Improve staff and inmate safety by housing, classifying, and reclassifying appropriately and accurately—every time

Reduce stress, save time, and mitigate risk through defensible classification decision support.
