Decision Tree Automation

Streamlined, affordable classification management for jails with smaller capacity and budgets.

Small jails, typically housing 150 beds or less, face unique challenges in managing inmate populations effectively. With limited budgets and resources, these facilities often struggle to implement robust classification systems that ensure safety, streamline operations, and comply with legal standards. As former practitioners, many of whom have worked in jails with limited budgets and capacity, we created the equivant Corrections' Decision Tree Automation solution to provide the functionality you need at a fraction of the cost.

Key Features

The Decision Tree Automation solution is built on a foundation of validated, court-tested processes, ensuring that your facility is equipped with the same level of rigor and reliability found in larger, more expensive systems. However, we've trimmed down the offerings to include only the essential functionality you need. **Here's what's included:**

Decision Tree
Our Northpointe Decision Tree instrument guides your staff through the classification process by answering just a few Yes/No questions for fast and accurate classification. The system helps staff determine the appropriate housing and supervision levels for each inmate based on established criteria. This ensures consistency in decision-making, reducing the risk of errors and enhancing overall safety.

Reclassification
A daily dashboard shows the inmates due for reclassification. No calendars or paper tracking necessary—your staff can reclassify inmates on-the-spot, eliminating administrative burdens and reclassification delays.

Reporting
With a variety of robust reports, you can easily pull a breakdown of inmates by classification level, the amount of overrides, the number of classifications accomplished in a set time period, reclassification data, and more. Paperless record keeping saves your staff time and keeps you facility compliant.

Decision Tree Automation customers can also add incidents and alternative screenings functionality to the solution.

With equivant Corrections' Decision Tree Automation solution, your facility:

- **Stays compliant**: Our system is based on methodologies and processes that have been validated in court, providing peace of mind that your classification management meets legal and industry standards.

- **Can focus on essentials**: By offering only the functionality you need, we ensure that your staff isn't overwhelmed with unnecessary features, allowing them to focus on what matters most—keeping your facility secure.

- **Saves money**: Designed for facilities with smaller budgets, our solution delivers high-quality, essential classification management without the financial strain. In fact, in most cases, this solution can be implemented for less than $25,000 for the initial year.

- **Saves time**: Streamlined processes and easy-to-use interfaces mean your staff can perform their duties more efficiently, saving time that can be better spent elsewhere in your facility. Plus, onboarding and training can be done in 30-45 days.

The foundation of comprehensive classification management—all without the hefty investment typically required to enhance safety and efficiency in your jail.
